Can a solar inverter charge a battery?

B. When the battery is low voltage (i.e. the voltage of a conventional single battery is 11vdc) and the mains power input is normal,the inverter will switch to the AC mode and the mains power will supply power to the load completely,while the solar energy will charge the batterybut the mains power does not charge the battery.

What happens if a solar inverter is interrupted?

B. When the solar is abnormal (the solar volage exceeds the working range of the inverter or the solar is interrupted,the inverter will directly switch to the AC mode for power supply,and the mains power will charge the battery. A.
