

Anti-fouling treatment of photovoltaic panels

Why do solar panels have anti-reflective coatings?

Anti-reflective coatings on the solar panels' glass enhance light transmittance, consequently increasing the overall efficiency of the photovoltaic module. 10,15 Moreover, anti-reflective coatings are necessary to ensure the safety of drivers.

What is a photovoltaic coating material?

A coating material for photovoltaic solar panels that combines anti-reflective and self-cleaning properties through a novel nanocomposite system. The coating comprises a matrix of polylactic acid (PLA) with titanium dioxide (TiO₂) and silicon dioxide (SiO₂) nanoparticles as base components.

Do solar panels have antifouling properties?

Scientific Reports 12, Article number: 1675 (2022) Cite this article Soiling of photovoltaic modules and the reflection of incident light from the solar panel glass reduces the efficiency and performance of solar panels; therefore, the glass should be improved to have antifouling properties.

Why do photovoltaic panels need a self-cleaning coating?

The self-cleaning coating has attracted extensive attention in the photovoltaic industry and the scientific community because of its unique mechanism and high adaptability. Therefore, an efficient and stable self-cleaning coating is necessary to protect the cover glass on the photovoltaic panel. There are many self-cleaning phenomena in nature.

Floating photovoltaic (FPV) modules are increasingly adopted for sustainable energy generation but their outdoor exposure to dust and environmental pollutants significantly reduces ...

To address PV module contamination, research efforts have primarily concentrated on two surface treatment methods: biomimetic films [12] and anti-reflective coatings [13, 14]. Biomimetic ...

A coating material for photovoltaic solar panels that combines anti-reflective and self-cleaning properties through a novel nanocomposite system. The coating comprises a matrix of ...

Article Open access Published: 06 February 2026 A new anti-soiling approach based on oleic acid-modified Al₂O₃ nanocoatings for photovoltaic panels Mustafa Arslan, İlyas Deveci, Cemile ...

Features of the Innovative Coating This transparent coating possesses self-maintaining, anti-fouling, and anti-static properties, initially designed to inhibit the growth of algae and lichens on solar panels. ...

Anti-reflective coatings on the solar panels' glass enhance light transmittance, consequently increasing the overall efficiency of the photovoltaic module. 10,15 Moreover, anti-reflective coatings are ...

Power generation using solar photovoltaic (PV) panels is the foremost step towards carbon emissions

neutrality. However, factors like soiling, reflection, shade, humidity, the ...

Chapter A Critical Review on Anti-soiling and Anti-reflective Coatings for Self-Cleaning Surface on Solar Photovoltaic Panels February 2025 DOI: 10.1007/978-981-97-4167-0_14

The outdoor power of the spark-discharged-titanium coated and uncoated PV panels was measured for 10 months at Chiang Mai, Thailand.

TiO₂ is widely used to prepare super-hydrophilic coatings on glass covers of photovoltaic panels due to its good photocatalytic activity. CVD-based surface treatment is suitable for preparing ...
