

What is Belarus' energy policy?

Energy policy in Belarus focuses on providing reliable energy while reducing imports dependence. The government is contemplating attractive investment measures and fuel diversification to include more coal and renewables into the country's energy mix.

How is energy used in Belarus?

Total energy supply (TES) includes all the energy produced in or imported to a country, minus that which is exported or stored. It represents all the energy required to supply end users in the country.

Why do we need a sectoral breakdown of the energy system?

Both are needed to fully understand the energy system. The sectoral breakdown of a country's energy demand, which is based on its economy, geography and history, can greatly impact its energy needs and which energy sources it relies on to meet those needs - such as fueling automobiles, heating or cooling homes or running factories.

Additional notes: Capacity per capita and public investments SDGs only apply to developing areas. Energy self-sufficiency has been defined as total primary energy production divided by total primary energy supply. ...

Reasons to reform Belarus' energy system: Belarus ranks among the top twenty most energy-dependent countries globally, importing 83.8% of all consumed energy resources. While the construction of ...
