What is a car battery inverter?

A car battery inverter is a device that transforms the 12V direct current (DC) electricity stored in your vehicle's battery into 120V or 230V alternating current (AC)--the type of power most household devices require. In simple terms, it allows you to plug in and run your everyday electronics right from your car.

What is a car power inverter?

At its core, a car power inverter is a device that converts the direct current (DC) from your car's 12-volt battery into alternating current (AC), which is what most household electronics require.
