

How to change the oil of Fengjun 5 generator

How often should generator oil be changed?

Most generator manufacturers recommend changing the oil every 50-100 hours of use. But even if you use your generator infrequently, you should still change the oil at least once a year. Fresh oil improves performance and makes starting easier. A routine oil change gives you peace of mind knowing your generator is ready to go when you need it.

How do you lubricate a generator engine?

Start your generator and let it run for a couple of minutes to allow the clean oil to move throughout and lubricate the engine. After a couple of minutes, turn your generator down and re-check if the oil level is within the recommended range. If not, then follow the steps above and add more oil until you reach the required level.

How do I change the oil in my Generator?

Changing the oil in your generator is essential for its longevity. The first step is to locate the oil drain plug. This ensures you can efficiently drain the old oil. Follow these steps to find and use the oil drain plug properly. The oil drain plug is usually beneath the generator's engine.

How to change engine oil?

Usually, SAE 30 or 10W-30 oil is suitable. The right oil ensures the engine performs well in different temperatures. Once you've chosen the right oil, it's time to add it. Follow these steps: Place the generator on a level surface. Open the oil fill cap. Insert a funnel to avoid spills. Pour the new oil slowly.
