

How to match photovoltaic panels with lamps

With this in mind, what we have here is a complete guide on how you can wire your own solar panel so as not only to ensure efficiency but also to make installation easier.

Calculating Solar Panel, Inverter and Battery Charger Specifications
 Estimating Load Wattage
 Determining Approximate Solar Panel Dimension
 Calculating Battery Ah
 Evaluating Charger Controller Specifications
 Assessing Inverter Specifications

1) First you will need to estimate how much watts of electricity you may require for the specified load. Let's say you have a 100 watt load that needs to be operated for approximately 10 hours, in that case the total power required could be estimated simply by multiplying the load with hours, as given under 100 Watts x 10 hours = 1,000 Watt hours. ...See more on homemade-circuits
