

India rooftop solar panels

What are rooftop solar power solutions in India?

Rooftop solar power solutions are now rapidly becoming common in India. The residential or commercial solar panel systems installed on the roof of a building to generate solar power. This system captures the sun's energy through solar panels. The solar panels convert it into electricity using 'photovoltaic cells' made of semiconductor material.

How to encourage rooftop solar installation in India?

The Indian government has rolled out several initiatives to encourage rooftop solar installations. The PM Surya Ghar Yojana offers a subsidy of up to 40% on residential solar installations (for systems under 10 kW). For smaller systems (up to 3 kW), subsidies are even higher, covering 40% of the installation cost.

Which type of rooftop solar system is best in India?

The most preferred type of rooftop solar for housing societies, homes, and commercial buildings in India is the on-grid system. It's the cheapest of the three types, offers the best return on investment, and is extremely trustworthy in urban areas with a reliable grid.

How much does rooftop solar cost in India in 2025?

The cost of installing rooftop solar at homes in India in 2025 with a subsidy under the PM Surya Ghar Muft Bijli Yojana can range between ~Rs. 90,000*in Lucknow for a 2 kW solar system and ~Rs. 5.62 lakh*in Bengaluru for a 10 kW solar system.

Learn everything about installing a rooftop solar system, from solar panels to inverter installation, and how subsidies make it affordable.

Ground-Mounted Or Rooftop-Mounted?
A new solar project is installed every 2.5 minutes, and yours just may be the next one. One of the biggest decisions you'll have to make before getting started, though, is between ground-mounted and rooftop-mounted panels. Ground-mounted panels cost a lot more than roof-mounted systems because they require additional materials, time, and labour. So...
