Should you DIY a solar panel system?

Setting up a solar panel system can be one of the most exciting home projects you'll ever take on, whether you're ready to tackle it yourself or prefer to bring in the pros. DIY offers that hands-on satisfaction--the thrill of piecing together your own energy source, step-by-step, right on your roof.

How do I install my own solar panel array?

The easiest way to install your own solar panel array is to buy a solar panel kit. The main solar components that come with every solar power system or solar panel kit are: Solar Panels Solar panels convert sunlight into electricity through a process called the photovoltaic effect.

How do you install a solar panel?

To install a solar panel, first, mount the PV array onto the structure using lag screws or bolts. Next, connect the wires from each panel together using electrical connectors. Run these wires inside conduit tubing for protection from weathering, and finally, attach all ground wires into one grounding rod that's driven into the soil at least 8 feet deep. This is a step-by-step guide to powering your home with DIY solar panel installation.
