What is a containerised microgrid (CMG)?

ed to the national grid. The power system can be remotely operated and monitored, ensuring continuous availability of supply to customers. Eskom is using Containerised Microgrids (CMGs) powered by Solar Photovoltaics (PVs). All the electricity generation, distribution, and storage equipment for the CMG is housed in a shipping container.

What is a modular microgrid?

In the ongoing effort to lower the cost of microgrid deployment, one concept that continues to evolve is that of the modular microgrid, best expressed in a system that can fit inside a single shipping container. It's not a new idea.

Who develops container microgrids?

Another developer of container microgrids is Arizona State University (ASU) Associate Professor Dr. Nathan Johnson, who heads ASU's Laboratory for Energy And Power Solutions. Before beginning his faculty position at ASU, Johnson was an NSF Postdoctoral Fellow at HOMER Energy.

What drives microgrid development?

Resilience, efficiency, sustainability, flexibility, security, and reliability are key drivers for microgrid developments. These factors motivate the need for integrated models and tools for microgrid planning, design, and operations at higher and higher levels of complexity.

Photovoltaic modules and different battery technologies are installed outside and inside the container, respectively, with cabling extending to the container to connect these components to...
