

Ireland's power grid is equipped with 10 energy storage

EirGrid, which is responsible for managing, planning and operating Ireland's high voltage electricity grid and market, has released the All-Island Resource Adequacy Assessment, which looks at the balance ...

Ireland's energy emissions are falling at a rate that is short of what is needed. But the insights from this report show us what is possible once we put our shoulder to the wheel. In 2024, we had 41% of our ...

Statkraft, the largest producer of renewable energy in Europe, has launched Ireland's first ever four-hour grid-scale Battery Energy Storage System beside its windfarm at Cushaling in Co Offaly.

LONDON (ICIS)-Irish utility ESB and geological energy company dCarbonX announced on 12 August a 3TWh hydrogen storage project situated ...

In 2024, data centers consumed 6,969 gigawatt hours of electricity, 22% of Ireland's total metered use, up from 5% in 2015. Their demand grew 10% year on year, compared with 3% among ...

New high-voltage grid infrastructure, such as underground cables, pylons and substations, is also necessary to match Ireland's grid capacity with its renewable energy ambitions.

The Irish Government's Climate Action Plan 2021 set out the need for an energy storage policy for Ireland to support 75% reduction in power sector CO2 emissions by 2030.

The policy clarifies the key role of electricity storage in Ireland's transition to an electricity-led energy system, supporting Ireland's 2030 climate targets. It is considered a stepping stone on ...

Shaping Our Electricity Future is our plan to achieve government policy targets, version 1.1 published in July 2023. To achieve an 80% RES-E target we will need to raise SNSP to 95% We ...
