

Latest solar module prices in 2025

Will solar PV module prices rise in Q4 2025?

Energy data and analytics firm Wood Mackenzie believes that solar PV module prices will climb by about 9% in Q4 2025. The rise is driven by polysilicon consolidation, supply cuts, and the removal of China's 13% VAT export rebate, with further increases expected in 2026, according to the analysts.

How much does a solar module cost in 2025?

Specifically, in August 2025, the Price Index showed: about EUR0.055/Wp for low-cost photovoltaic modules, unchanged from July prices. "Manufacturers are moving quickly to end the devastating price war. The Chinese government is gradually phasing out tax incentives and subsidized solar module exports.

Will China end the VAT rebate on solar modules in Q4 2025?

China's decision to end the 13% VAT rebate on solar modules and storage exports from Q4 2025 will be the 3rd decisive factor. Since China supplies over 80% of solar modules and 90% of battery packs worldwide, the end of the rebate will raise global benchmark prices, explains Wood Mackenzie.

How much does a solar module cost?

Average price of solar modules, expressed in US dollars per watt, adjusted for inflation. Data source: IRENA (2025); Nemet (2009); Farmer and Lafond (2016) - Learn more about this data Note: Costs are expressed in constant 2024 US\$ per watt.

Comprehensive guide to solar module prices in 2025. Current costs, market trends, buying strategies, and price forecasts. Updated with latest data.
