What are LiFePO4 battery voltage parameters?

Additionally, to ensure battery safety and longevity, LiFePO4 batteries have critical voltage parameters, namely Low Voltage Cutoff (the voltage at which the battery stops discharging) and High Voltage Cutoff (the voltage at which the battery stops charging). These parameters are typically detailed in the battery's datasheet.

What happens if you undercharge A LiFePO4 battery?

Undercharging, on the other hand, might result in insufficient power supply and reduced efficiency. For a 24V LiFePO4 battery or a system comprised of multiple 12V batteries connected in series, the charging parameters are adjusted accordingly: Charging Current: Should be regulated to 0.5C to 1C.
