

# Low-price bidding for wind power generation at communication base stations

Effective bidding strategies have been shown to increase market-clearing prices, thereby increasing the profits of the power producer. Due to energy power generation, renewable energy has been one of ...

The dataset includes maximum, minimum, weighted, and median transaction prices for each hour, along with predicted wind power generation and day-ahead prices for a specific wind farm.

Currently, many wind farms and solar arrays are under construction in Southwest China, and the penetration of intermittent renewable energy is growing rapidly. The operating characteristics of the ...

Perfect for communication base stations, smart cities, transportation, power systems, and edge sites, it also empowers medium to high-power sites off-grid with an energy-efficient, hybrid

We investigate the use of wind turbine-mounted base stations (WTBSs) as a cost-effective solution for regions with high wind energy potential, since it could replace or even outperform ...

Results demonstrate that the combined deployment of wind generation, battery storage, and adaptive DR significantly reduces microgrid operating costs while enhancing peak load ...

Nowadays, it is inevitable for renewable energy power stations to participate in market-oriented competition. In this paper, a strategic bidding model based on.

At present, wind and solar hybrid power supply systems require higher requirements for base station power. To implement new energy development, our team will continue to conduct technical research ...

In this study, a two-stage bidding strategy model is developed for wind farms aiming to maximize their spot market returns. The model utilizes a short-term CNN-LSTM tariff prediction ...

Mar 15, 2024 &#183; Our study introduces a communications and power coordination planning (CPCP) model that encompasses both distributed energy resources and base stations to improve ...
