

Mauritius energy independence

The energy mix in Mauritius is dominated by coal and oil. Almost 10% of the country's final energy consumption is generated by modern renewable sources of energy - a share that has gradually ...

Summary: Mauritius, an island nation with no proven gas or coal reserves, relies heavily on fossil fuel imports, which it has reduced through an energy development program. The country also has plans ...

For Mauritius--a small island state with almost full electricity access, a services-dominated economy and high dependence on imported fossil fuels--the energy transition is simultaneously a climate, ...

In its 2021-2022 budget speech, the government announced plans to increase the use of renewable sources of energy for electricity generation to 60 percent, phase out the use of coal, and ...

Mauritius is facing a growing energy crisis, with peak electricity demand nearly matching its generation capacity. To address this, the government has proposed the use of a powership, a ...

Find relevant information for Mauritius on energy access (access to electricity, access to clean cooking, renewable energy and energy efficiency) on the Tracking SDG7 homepage.

Small Island states are disconnected from the main continent and given that they have limited resources for energy supply, the isolation leads to a high dependency on fossil fuels.

In the wake of current challenges including the energy crisis, a strategic reset was essential to reposition Government's ambitions within a realistic and achievable framework, hence ...

It is a strategic effort to shield the island from global fuel price fluctuations, reduce environmental impact, and move towards energy independence. By investing in solar power, ...

Mauritius depends heavily on fossil fuels, which make up over 80% of its energy mix. This dependency, coupled with a debt level rising to 90% of GDP--beyond the legal 80% limit, according ...
