

# Naming rules for liquid-cooled energy storage systems

What should be considered when deploying liquid cooling solutions?

deploying liquid cooling solutions using liquids with lower GWP values, as well as ODP. For legacy cooling systems where coolants with higher GWP are already deployed, consideration should be given to the innate risk of coolant leakage, and a coolant reclamation program should be in place. In addition to coolants, materials

Which requirement document is applicable to rack manifold distributed liquid cooling?

before the contribution is proposed for approval in the Incubation Committee meeting. This requirement document is applicable to rack manifold distributed liquid cooling with a Technology Cooling System (TCS) fluid loop. This is the fluid loop from the Coolant Distribution Unit (CDU) to the rack, through

How to choose a cooling liquid?

pure water with additives, glycol based liquids, dielectric liquids, or refrigerants. The selection of cooling liquid should not be made lightly and should take into consideration operational need, material compatibility with the wetted materials in all cooling components, IT equipment serviceability

Which materials are used in liquid cooling systems?
