What is a nickel cadmium battery?

The nickel-cadmium battery uses nickel hydroxideas the active material for the positive plate,and cadmium hydroxide for the negative plate. The electrolyte is an aqueous solution of potassium hydroxide containing small quantities of lithium hydroxide to improve cycle life and high temperature operation.

How does a nickel cadmium battery generate gas?

$2\text{NiOOH} + 2\text{H}_2\text{O} \rightarrow \text{Cd}(\text{OH})_2 + 2\text{Ni}(\text{OH})_2$ During the latter part of a recommended charge cycle and during overch e, nickel-cadmium batteries generate gas. Oxygen is generated at the positive (nickel) electrode after it becomes fully charged and hydrogen is formed at the negative (cad
