Can an off-grid hybrid solar PV/FC power system be designed?

One of these researches in 2 presented a case study in the desert region of the United Arab Emirates. This study introduced a technical-economic analysis based on integrated modeling, simulation, and optimization approach to design an off-grid hybrid solar PV/FC power system.

How to choose the best size and location for off-grid hybrid systems?

Another approach for choosing the best size and location for off-grid hybrid systems was presented by 3. They considered economic, technical, social, and environmental factors to discover the ideal capacity and location for continually meeting the load while reducing LCOE and overall life cycle cost.

What is a distributed hybrid energy system?

This system was designed to meet the residential community's energy demand of 4500 kWh/day (150 houses). The total power production from the distributed hybrid energy system was 52% from the solar PV and 48% from the FC with a 40.2% renewable fraction, which was a low value for the renewable energy penetration of this system.
