How do I choose a horizontal solar panel?

Talk to a solar expert to find the best panel direction and setup for your home or business. When you pick horizontal solar panels, you put them flat or a little tilted. This is called horizontal installation or horizontal mounting. Most houses use this way because it fits normal roof shapes.

Should you install horizontal or vertical solar panels?

When you look at horizontal and vertical solar panel installation, energy efficiency is very important. You want your panels to turn sunlight into power you can use. Most homes and businesses get the best results with horizontal solar panels. These panels catch sunlight all day long.

What is a solar panel size?

When discussing solar panels, the term "size" can be confusing because it refers to electrical capacity rather than physical dimensions. Solar panel size is measured in watts (W) and indicates how much electricity the panel can produce under standard test conditions.

How much space does a horizontal solar system need?

Horizontal solar panels need a lot of flat or tilted space. You usually see these panels on rooftops or in big open fields. For every megawatt of energy you want to make, you need between 20,000 and 40,000 square meters. This means you must have a large area just for your solar system.
