Is energy storage a good investment?

The return of investment is an important metric about how attractive an investment may be. However this is an important note that energy storage usually does not generate electricity savings directly, but allows the transport or trading of electricity. This usually results in storage not having a high ROI like solar investments, for example.

Is a high ROI a good investment?

It can be the case that a project has a high ROI but very little overall savings and earnings. A large overall savings and thus earnings will result in a lower ROI than a pure solar investment. Bear in mind that a high ROI also does not include a risk impact but does include inflation in this energy storage calculation.

What is storage NPV in terms of kWh?

The storage NPV in terms of kWh has to factor in degradation, round-trip efficiency, lifetime, and all the non-ideal factors of the battery. The combination of these factors is simply the storage discount rate. The financial NPV in financial terms has to include the storage NPV, inflation, rising energy prices, and cost of debt.

How is the NPV of a SuperTitan battery calculated?

For an electricity cost of EUR0.15/kWh and a timeframe of 20 years, the results are: SuperTitan battery NPV: +EUR233.91 LFP battery: -EUR6.87 IRR is calculated using the same concept as net present value (NPV), except it sets the NPV equal to zero.
