

Renewable energy growth fonafote

The lifespan of renewable energy policies in a new presidential administration will be an open question into 2025. Undeniable customer demand for renewable sources could keep some worries in check, ...

Solar, wind, hydro, geothermal and bioenergy are reshaping global power systems. Here's how they work and what 2025 data reveals.

We explore the data to see where the clean energy transition stands today, from rising investment and job growth to grid needs and critical mineral demand.

According to the World Economic Forum, Brazil has increased its renewable energy and share of clean energy due to long-term investment in ...

The world generated more electricity from renewable energy than coal for the first time ever, a new report finds. The United States is lagging behind.

In 2026, renewable developers are expected to emphasize near-term agility--diversifying inputs, stockpiling, and digitizing visibility--while investing in ...

The electrification of transportation, the rising residential and commercial adoption of rooftop solar panels, and the growth of energy storage systems further ...

The renewable energy growth forecast for the 2025-2030 period is 5% lower compared with last year's report, reflecting policy, regulatory and market changes since October 2024.

Renewable Energy Generation Renewables in The Electricity mix Hydropower Wind Energy Solar Energy Biofuels Geothermal How much of our electricity comes from renewables? In the sections above we looked at the role of renewables in the total energy mix. This includes not only electricity but also transport and heating. Electricity forms only one component of energy consumption. Since transport and heating tend to be harder to decarbonize - they are more reliant on oil and gas - r... See more on our world in data IRENA - International Renewable Energy Agency Renewable energy statistics 2025 - irena This publication presents renewable energy statistics for the last decade (2015-2024).
