

Solar hourly power generation data

This dataset contains yearly electricity generation, capacity, emissions, imports and demand data for European countries. You can find more ...

Includes hydropower, solar, wind, geothermal, biomass and ethanol. Uranium fuel, nuclear reactors, generation, spent fuel. Comprehensive data summaries, comparisons, analysis, and ...

In this tool you can get the full data set of solar radiation and other data needed to calculate PV power hour by hour for long time periods. PVGIS can also perform ...

From 2017 September to 2024 February

Lawrence Berkeley National Laboratory (Berkeley Lab) estimates hourly project-level generation data for utility-scale solar projects in the seven organized wholesale markets and 18 additional Balancing Areas.

To fill this gap, this work provides a dataset of 43 years of coincident plant-level wind and solar power production data.

UPV In addition to the annual solar summary statistics Berkeley Lab provides hourly generation estimates for 2964 utility-scale solar projects, starting at the project's commercial operation date (or ...

This report is posted every 5 minutes and includes system-wide and solar region aggregations of the Intra-Hour Photovoltaic Power Forecast (IHPPF) for the next two hours, with five ...

This dataset contains hourly capacity factors for each renewable resource class and region (in this case, county). Technologies like large-scale utility PV (UPV), onshore (land-based) ...

This dataset contains hourly power production simulation for 2019 over the Continental US (CONUS) with a 12 km spatial resolution. There are 21 members in the weather forecast ensemble ...
