

Solar power generation water level control

Automatic water level controller for both overhead and underground tank with a solar supply system is designed to monitor the level of water in a tank. It displays the level of water and when it is at the ...

Making an automated water pumping system is the aim of this project. This technology is able to detect the amount of soil moisture and makes an intelligent judgement regarding whether to turn on or turn ...

HAWK's AccuSolar Solar Powered Level Monitoring System monitors process conditions through wireless WiFi that communicate up to 1,500 feet to a base station PC.

After some dry summers our well level has dropped significantly, so this allows us to monitor the well water level & send alerts.

cost-effective solution for water level monitoring in rural areas. The system consists of a solar panel, a controller, a water level sensor and a pump. The system is designed to

This research introduces a novel method that combines smart water management technologies with a photovoltaic pumping system to provide a sustainable domestic water supply to ...

This innovative device leverages the power of solar energy to monitor and log water levels in real-time, providing critical data for diverse applications, ranging from environmental monitoring to agricultural ...

The project aims to develop an automated solar-powered water pumping system for irrigation. The system utilizes sensors to assess soil moisture and control the pump accordingly. Solar energy offers ...

Water shortage is a major problem in most of the residential areas. Water level maintaining in the tanks within the safe level is very important to avoid wastage.

This project is an Arduino-based smart water management system designed for efficient and automated water level monitoring and control. It is equipped with Bluetooth connectivity for remote operation ...
