

Solar power industry in 2025

The solar industry in 2025 is more than just a trend--it is the backbone of a sustainable energy revolution. With falling costs, better efficiency, and strong government support, solar is ...

Nearly 50 GWdc are expected to come online in 2025, and almost 44 GWdc in 2026; then, annual installations will stabilize around 38-39 GWdc annually from 2027 to 2030. However, the ...

EIA projects that PV's growth in 2023 (27 GWac) and 2024 (36 GWac) will continue in 2025 (39 GWac) and remain at similar levels in 2026 (36 GWac). In 2024, 24 states and territories ...

In our STEO forecast, utility-scale solar is the fastest-growing source of electricity generation in the United States, increasing from 290 BkWh in 2025 to 424 BkWh by 2027.

Across all regions, developing a skilled workforce and setting ambitious solar and storage targets are essential tasks. In these times of political uncertainty, low-cost solar power could turn into ...

This blog dives into key market trends that will shape the solar industry in 2025, helping you stay informed and prepared for what's ahead.

U.S. solar market in 2025 saw record installations, strong utility growth, softer residential demand, and rising manufacturing capacity despite tariffs and policy uncertainty.

Growth Trends: According to the Department of Energy, solar is projected to make up 58% of total new electricity generation in the United States in 2024.

Solar energy is evolving rapidly. Explore solar trends in 2025, including new technology, efficiency gains, and growing demand across the market.

The race is on to capitalise on huge electricity demand growth from data centres. How is the solar industry tackling this challenge? Plus, how game-changing could solar tech innovation be in ...
