OverviewHistoryAttributesDesignOperationSpecific energy and energy densityApplicationsDevelopmentThe vanadium redox battery (VRB), also known as the vanadium flow battery (VFB) or vanadium redox flow battery (VRFB), is a type of rechargeable flow battery which employs vanadium ions as charge carriers. The battery uses vanadium's ability to exist in a solution in four different oxidation states to make a battery with a single electroactive element instead of two.

Flow batteries (FBs) are a type of batteries that generate electricity by a redox reaction between metal ions such as vanadium ions dissolved in the electrolytes (Blanc et al., 2010). VRFBs ...

Flow batteries always use two different chemical components into two tanks providing reduction-oxidation reaction to generate flow of electrical current.
