

In recent years, China has made many new breakthroughs in the development of wind power technology in the fields of high-power wind turbines, wind turbines for ultra-low wind speed, ...

According to a country analysis brief released by the Energy Information Administration in May of 2025, China added 76 gigawatts of wind energy in the year 2024 alone. As a matter of fact, ...

China's installed wind power generation capacity has consistently ranked first in the world for an impressive 15-year streak, according to the latest data released by the China Electricity ...

China's 1.4 TW operating solar and wind outstrips thermal power In Q1 2025, China's wind and solar capacity surpassed its thermal (coal and gas) capacity for the first time, supplying nearly 23% of the ...

China's floating offshore wind prototypes The global deep-sea floating offshore wind is still in the pilot demonstration stage. By the end of Sept. 2024, 5 semi-submersible wind turbines have been ...

"Chinese turbine makers increasingly dominate the global wind energy business," said Cristian Dinca, wind associate at BloombergNEF and lead author of the report.

From steppe to power source, China's wind energy sector is revolutionizing the country's electricity supply and taking on a global leadership role. With its vast landmasses in the north and an...

China is the world leader in wind power generation, with the largest installed capacity of any nation [1] and continued rapid growth in new wind facilities. [2]

The 13th Five-Year Plan established a goal of 210 GW of grid-connected wind power by 2020, including 5 GW of offshore wind. Provinces were given specific deployment goals, including 27 GW for Inner ...

Data and information about Wind power plants and their location plotted on an interactive map of China.

Wind power generation Meiqiao Wind Power
